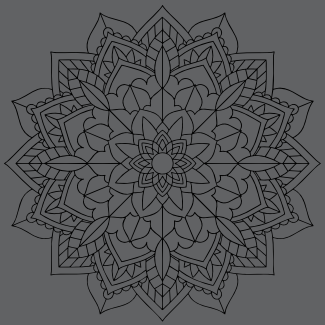
WELCOME TO VMD 105!

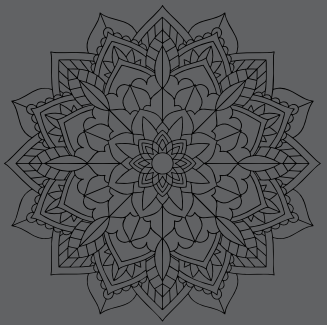


Hey! My name is Chris Kelly. I took VMD 105 because I wanted to get familiar with being able to design on a computer. I would love to be an illustrator some day! I've enjoyed all of the sections so far but my absolute favorite has been Adobe Animate. Below, you'll see a few of the creations I have made during my time in this class. Hope you enjoy!

PHOTOSHOP

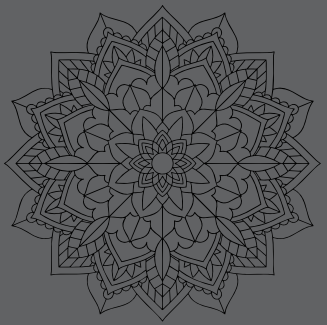
Here is my Photoshop project. This was the first piece I ever created on a computer. This was a fun one to do. My idea behind this was to give the impression of daydreaming. I constantly find myself sitting right there at my desk staring out my windows for long periods of time, getting lost in my thoughts. I used space as a metaphor for daydreaming and in this picture I am quite literally staring off into space!

ILLUSTRATOR



Here is my Illustrator project. It was based off of my photoshop project. I've always enjoyed drawing and the alien creature in picture is one that I've always drawn for years and years. I finally had a chance to put him into illustrator and create a digital version of him! If I were to do this project again, I think I would try out a different rastor photo for the background.

ANIMATE



Here it is! My Animate project! This was my favorite of all the sections. Again, I have my alien creature but I was able to bring him to life! I would like to dive deeper into the world of Adobe Animate and keep making little cartoons just like this one. Hopefully I can find a career where this will come in handy!
