

WELCOME TO MY PAGE

My name is Pei Ling! This portfolio will showcase my final projects for adobe photoshop, illustrator, and animate. I had a lot of fun getting creative with my ideas and seeing them come to life. There were a few platforms I have learned previous to taking this class and it was nice to revisit the basics. There were also platforms I found rather complicated but after contious practice, I was able to understand the general idea on how to utilize the different tools offered. Go ahead and take a look at my work and let me know what you think! :-)

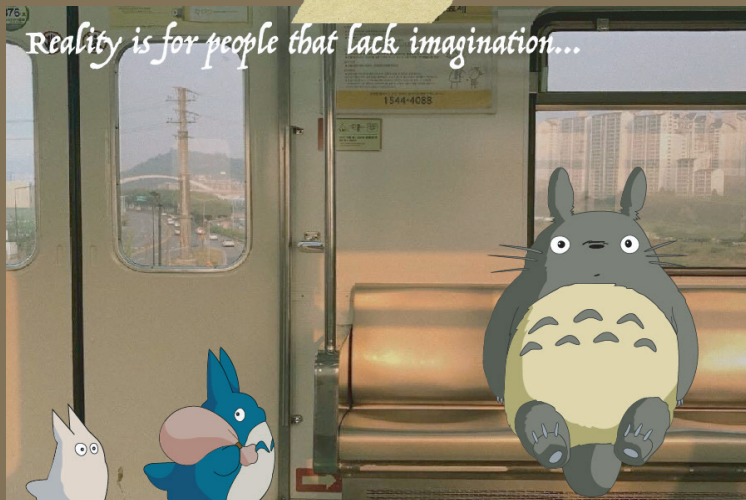

ADOBE PHOTOSHOP

For my Raster project, I wanted to combine medieval with reality. I wanted those who view this image, to feel as if they are hiding behind a bush looking out and feeling like they entered a fantasy world. I purposely made the bush look brighter and realistic compared to what's around.

I used the the magic wand, object selection, and the lasso tool to cut out the images I wanted to use, i.e the girl in the middle, moon, all the dragons, the bush, the wolves in the background, and the butterflies. I also added fog to make the whole picture look more fantasy-like.

ADOBE ILLUSTRATOR

For this project, I wanted to incorporate studio ghibli's Totoro into a real-life setting. There is a popular scene showing Totoro waiting at a train stop and so I wanted to create an image showing him on the train as indicating that he has boarded.

The most challenging part was taking into consideration of the shadows on the characters, hoping to make them look more realistic as if they are either sitting or walking through the train. I really enjoyed this project and was able to accomplish what I wanted the outcome to look like.

ADOBE ANIMATE

For this final project, I decided to show the process of a tree growing. I created motion tweens for the clouds, birds, sun, and a shape tween for the background so it looks like the day is changing. I created the tree by drawing a little bit of it for each frame making it look like it's growing as time goes by.

I wouldn't say this project was too difficult to make but I did have to go back to the modules just to see how different things are done. I initially wanted to add more to the background but I felt like too much was already moving so I ended up leaving it as just the tree and some birds. I also added some bird noises on top of the music.
