INTRODUCTION

Hi All.
I'm Duygu and I'm a student at CCSF. I would like to become a UX(user experience) designer in a company. In this project, I would like to show all my work that I made in VMD 105 class. My work includes Adobe Photoshop, Adobe Animation, and Adobe Illustrator projects.

ADOBE PHOTOSHOP

The concept in this work was to take my dog out above the clouds and design a special small space for it.

ADOBE ILLUSTRATOR

The concept was to create a monster. I mostly used the pencil tool to draw this monster.

ADOBE ANIMATE

I wanted to show the fish going to the surface of the aquarium and diving back into the water in this work. At the same time, as the text moves from right to left, the monster grows on the screen and the light turns on and off.
